SUMMARY

Systems-oriented IT Infrastructure & Systems Engineer with extensive experience administering enterprise Windows Server environments, Active Directory, virtualization platforms, and core network services within mission-critical aviation and government sectors. Proven track record in system configuration, Group Policy management, user provisioning, disaster recovery, and operational stability. CompTIA Security+ certified professional skilled in system performance optimization, vulnerability mitigation, identity governance, and maintaining enterprise business continuity.

EDUCATION

Al-Baha University Saudi Arabia
Bachelor of Computer Engineering

EXPERIENCE

IT Infrastructure Engineer October 2025 – Present
Saudi AVITO Information Technology Limited Company *King Fahd International Airport, Dammam, Saudi Arabia*

- Administer and maintain mission-critical enterprise IT systems and server infrastructure at King Fahd International Airport, ensuring high operational stability and service availability.
- Manage Active Directory domain services, including identity governance, Group Policy Objects (GPOs), user provisioning, and role-based access control policies.
- Perform end-to-end Windows system administration, covering system configuration, maintenance, updates, performance monitoring, and advanced troubleshooting.
- Configure and support core network infrastructure services such as DNS, DHCP, and TCP/IP to ensure seamless network integration and server availability.
- Conduct infrastructure performance monitoring and proactive troubleshooting using enterprise tooling to minimize service disruptions and optimize system health.
- Execute system backup, disaster recovery, and operational security controls to protect server assets and comply with airport regulations.

Information Security Specialist October 2021 – November 2025
Ministry of Islamic Affairs, Dawah and Guidance *Al Baha, Saudi Arabia*

- Supported regional server environments and information security practices to ensure reliable system operations.
- Conducted system vulnerability assessments and assisted in deploying patches and security baseline controls.
- Managed access control procedures and supported user domain account permissions in compliance with organizational policies.

Cybersecurity & Systems Engineering Intern
Ministry of Interior Complex (in coordination with 2P Perfect Presentation) *Makkah, Saudi Arabia*

- Supported system administration tasks and infrastructure readiness within a classified, highly secure operational setup under military supervision.
- Monitored system health and assisted engineering teams in troubleshooting operational system incidents to maintain maximum availability.
- Enforced access control guidelines and alignment with government infrastructure compliance protocols.

Information Systems Specialist Hajj Seasonal | 2025
Sadana Company *Makkah, Saudi Arabia*

- Supported digital infrastructure operations and critical business systems during seasonal operations.
- Maintained data integrity and supported operational continuity across business applications.
- Performed troubleshooting activities for infrastructure, systems, and network-related issues.
- Supported secure operational practices and compliance requirements.

Information Systems Specialist Hajj Seasonal | 2024
Sadana Company *Makkah, Saudi Arabia*

- Supported IT operations and maintained service availability during large-scale seasonal activities.
- Assisted in database operations and system support activities.
- Resolved technical issues related to infrastructure and operational systems.
- Maintained secure access practices and organizational data protection procedures.

IT Specialist October 2024 – October 2025
Albir Charity Association *Al Makhwah, Saudi Arabia*

- Managed end-user computing environments and supported organizational IT systems.
- Maintained secure connectivity and supported system availability.
- Assisted in endpoint security, backup operations, and business continuity activities.
- Supported disaster recovery and data protection practices.

TECHNICAL SKILLS

- **Systems Administration:** Windows Server, Active Directory, Group Policy (GPO), Identity Governance, User Provisioning, System Configuration, VMware.
- **Infrastructure & Services:** Microsoft 365, Virtualization, DNS, DHCP, TCP/IP, System Maintenance, Patch Management.
- **Operations & Continuity:** Technical Troubleshooting, Incident Management, Disaster Recovery, Backup Operations, Performance Monitoring, Business Continuity.
- **Security & Compliance:** Access Control, Endpoint Security, Infrastructure Protection, Risk Mitigation, Operational Security Practices.
